Club Patches

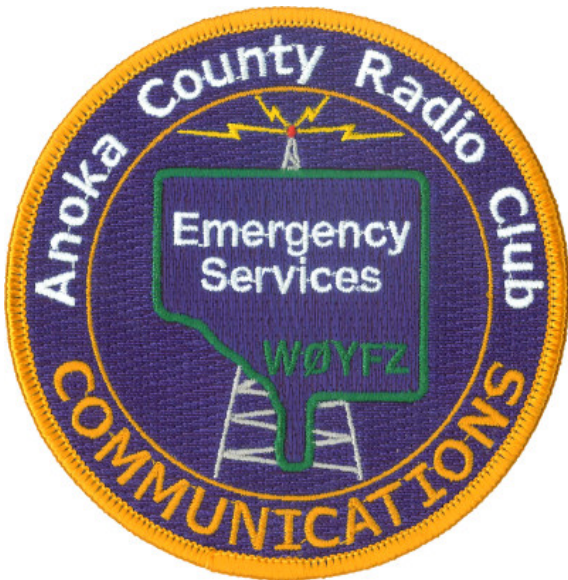

Iron-On Directions

Use the following directions to iron on your club patch:

- Heat your iron to around 350 to 400 degrees F. Set the steam option to OFF (use NO steam).
- Place the patch onto the item you want to adhere it to with the heat seal backing toward the item.
- Put a piece of cotton material between iron and patch.
- Hold the iron on the cotton material and patch for about 20 to 30 seconds.
- Let the seal cool for a minute, then check bond between the patch and the item you put it on.
- If the bond is not secure, repeat the process and increase the time by 10 seconds.

Note: These are just guidelines. The temperature and times depend on the material you are bonding the patch to.
